

## Product Information

### PHENYLMETHYLSULFONYL FLUORIDE

Product Number **P 7626**

Storage Temperature RT

CAS #: 329-98-6

Synonyms: PMSF;  $\alpha$ -toluenesulfonyl fluoride

#### Product Description

Appearance: White to faint yellow powder

Molecular weight: 174.2

Molecular Formula:  $C_7H_7FO_2S$

Melting Point: 91-92°C<sup>1</sup> Sigma typically finds values in the range of 91-94°C.

PMSF is a inhibitor of serine proteases and acetylcholinesterase.<sup>2</sup> It inhibits proteases such as chymotrypsin, trypsin, thrombin and thiol proteases such as papain.

PMSF inhibits serine proteases by sulfonating serine residues at the active site.<sup>3,4</sup>

#### Precautions and Disclaimer

PMSF is considered a highly toxic cholinesterase inhibitor. See Material Safety Data Sheet.

#### Preparation Instructions

PMSF is soluble in anhydrous isopropanol at 35 mg/ml with heating, resulting in a clear to very slightly hazy, colorless to faint yellow solution.

Recommended stock solution: 100 mM in anhydrous isopropanol or anhydrous (100%, not 95%) ethanol. A 200 mM solution in dry solvent is stable for at least 9 months at 2-8°C.<sup>5</sup> PMSF is very unstable in the presence of water. The half-life of aqueous PMSF at 25°C at pH 7.0, 7.5, and 8.0 is 110, 55, and 35 minutes, respectively.<sup>6</sup>

#### Storage/Stability

When stored as indicated, PMSF has a shelf-life of three years.
